

Topaz AM5/CD5 Top Tips

A brand new range from Cambridge Audio - Topaz delivers incredible performance and value for money, meaning it's the perfect time to enter the world of hi-fi separates, starting with the new AM5 integrated amplifier and CD5 CD player...

- Set it up, sit back and enjoy the massive improvement that the Topaz range offers over any one-box system! Designed from the ground up in London, the AM5 integrated amplifier delivers a refined 25 watts per channel into 8 ohms.

WHAT HI-FI?
SOUND AND VISION

HOT TIP!

Make sure you show off the audiophile pedigree of the AM5 with a good pair of stand-mount speakers such as the Cambridge Audio Sirocco range

- Incredible flexibility! With four rear inputs and one record output, the AM5 can support a wide range of external sources. Additionally, a front panel MP3/Portable Media Player input has been fitted which can be used with the headphone or line-level outputs of most portable players.
- For the most intricate experience, bass and treble controls have been added to the AM5 to enable your customer to adjust the sound to their preference.

- When only the best is good enough! MP3 players are convenient, but are no match for a proper CD player when a higher grade of sound quality is required. For the critical Digital to Analogue converter stage, the new CD5 features a WM8725 DAC from Wolfson Microelectronics.

- Adhering to three core principles – stunning performance, ease of use and incredible value – all PCBs in the new CD5 use double sided, fully surface mount technology, eliminating wire links and giving ultra short signal paths for optimum sound quality.

- For your customer's total convenience, the CD5 supports normal PCM playback from CDs (CD-DA) plus playback of both MP3 and WMA files. Why not demonstrate this flexibility by keeping a CD loaded with MP3s in the CD5 to demonstrate to your customer.

Did you know?

The CD5 allows you to program a unique sequence of up to 20 tracks from a disc, allowing your customer to queue up their favourite tracks on a disc!

HOT TIP!

Don't forget to allow for interconnects. The internal circuitry is of an exceptionally high standard – the benefit of which is degraded by using cheap interconnects. Why not show your customer the new high quality interconnect range from Cambridge Audio for perfect system matching?

- Continuing the new look! Cambridge Audio's usual attention to detail is present with a new casework design featuring a brushed aluminium front panel, rigid wrap-over lid assembly and carefully designed mechanicals for resonance control. All of this improves the sound and gives a much higher quality of look and feel.

Did you know?

The remote supplied with the CD5 not only controls the CD5, but also controls a Topaz SR10 stereo receiver, or AM10 integrated amplifier if required!

- Why not show your customer the dramatic improvement that the AM5 offers over their television's own speakers when watching a movie or their favourite TV show!

Top Tip

Always have an iD10 or iD50 iPod dock connected to the AM5 and keep an iPod in your pocket in case the customer doesn't have theirs.
